IEEE 802.16 Working Group on Broadband Wireless Access

Call for Contributions

IEEE Project P802.16.3:

Mobile Broadband Network Performance Measurements

Issued: 5 November 2014

On 30 August 2012, the IEEE-SA Standards Board authorized Project P802.16.3 for the development of a new standalone standard on *Mobile Broadband Network Performance Measurements*. The IEEE 802.16 Working Group is assigned to develop the standardization project.

This Call for Contributions solicits input documentation toward the development of P802.16.3, particularly on the following topics:

(1) Further comments on "IEEE P802.16.3 Architecture and Requirements for Mobile Broadband Network Performance Measurements" (IEEE 802.16-14-0078-00).

(2) Contributions toward the development of the P802.16.3 draft standard.

Also, the WG believes that it will be helpful to observe real implementations of the P802.16.3 architecture as embodied in measurement systems, including client software. We would like to help to coordinate participants interested in implementing such systems, sharing them with a broader audience, and testing interoperability among systems. We believe that, once communication and data collection begins, it will be possible to quickly advance the process of testing processes and metrics and that this will rapidly progress the standardization. We aim to aid in coordination among interested participants. We invite prospective participants to contribute documentation about their systems, and information about how it can be shared.

Contributions toward IEEE 802.16 Session #96 are requested by 4 March 2015. Contributions toward P802.16.3 teleconferences are requested at least one day before the teleconference. For the teleconference schedule, see the calendar.

Submit your contribution by the deadline above following the IEEE 802.16 Document Submission Instructions <http://ieee802.org/16/submit.html> using the File Code "03R0".
